POOR STUDY ROUTINE

FIXING HABITS

PROBLEMS:

CRAMMING:
Your brain needs downtime to consolidate memories; trying to force 10 hours of learning is not effective.

ILLUSION OF COMPETENCE:
Rereading notes or highlighting text is among the least effective study habits.

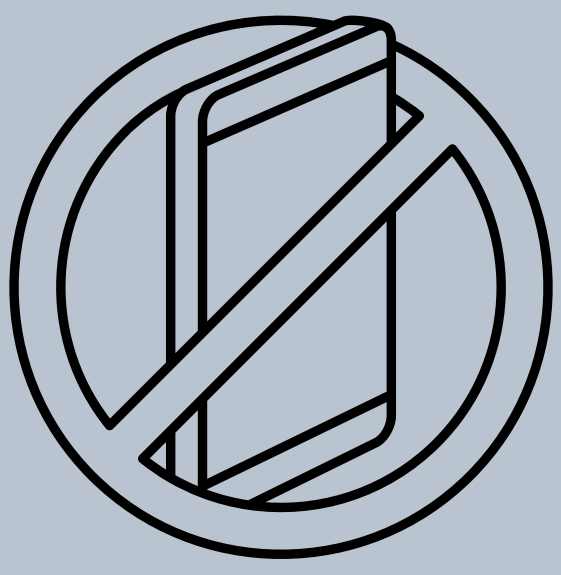
PROBLEMS:

MULTITASKING:
Attempting to study while being distracted to something, significantly decrease the quality of learning

SOLUTIONS:

SPACED REPITITION:
Instead of cramming, a lot a time for studying each day.

ACTIVE RECALL:
Instead rereading the material, you should try retrieval which is an act of pulling information out of your head.



SOLUTIONS:

DEEP WORK:
Remove any distractions on where you study.
